What is inValve?

inValve is a family of top quality plug-ins based on a simulation of the valve processing. All inValve plug-ins require PowerCore DSP accelerator by TC Electronic.

Features

- The audio processing runs in valves modeled by software.
- The model is inspired by TL-Audio devices. It means, we have measured the top class hardware processors produced by the legend of the valve audio.

inValve variants and versions

The inValve family

- inValve | Preamp
- inValve | Exciter
- inValve | Compressor
- inValve | Equaliser

All the effects have similar graphic interface in a 1U or 2U rackmount frame.

Distribution

- All variants require TC PowerCore
- The demo version runs on all PowerCores
- The distribution version is authorized for the unique PowerCore ID
- Authorization for a trial period is considered
